

# Kforce Global Solutions

## Case Study

### Microsoft SharePoint®

#### Business Challenge

A large insurance broker required a system to manage and maintain insurance certificates for the aerospace industry. The main requirements for the system were:

- Enable the upload of 20,000 documents a year
- Allow for upload of documents in bulk
- Allow for granular control of security on the documents
- Be delivered within 90 days (or a costly manual work-around would be implemented)

#### Kforce Global Solution

As a valued partner to this client, to which Global already provided more than 120 full time resources, Global was tasked to provide end-to-end development services for the project. Global designed a SharePoint®-based application that implemented Microsoft® .NET web application pages. The system allows users to upload single or multiple documents and also allows the documents to be deactivated or renewed. File-level permissions were implemented, which allows a SharePoint® group or individual to have read-only access to the uploaded document.

#### Results

A Global architect provided the Technical Design Specification which included a technical overview of the user interface, components, and data structures that support the new system. The document was presented to the client and allowed the client technical team to fully understand the technical approach and ensure the design's compliance with internal practices.

The Technical Design Specification was turned over to the Global development team, which delivered the software with quality exceeding client standards and adhering to the development standards utilized by the client. The development team, comprised of 5 resources (1 PM, 1 Solution Architect / Technical Lead, 2 Developers, and 1 QA), was formulated by Global to meet critical time constraints while adhering to cost thresholds.

The system was delivered on-time, on-budget, and provided the necessary functionality for the business. The project was also successful in that it minimized impact to existing client resources.

#### Environment

Microsoft SharePoint® (WSS 3.0), Microsoft® C#, Microsoft® .NET, Microsoft® ADO.NET

#### INDUSTRIES SERVED

- Financial Services
- Insurance
- Healthcare
- IT Products/Services
- Manufacturing
- Pharmaceutical

#### GLOBAL CAPABILITIES

- Application Development and Support
- Legacy Application Support
- Quality Assurance
- Web Development
- Infrastructure Support and Service Desk
- Business Process Management
- Staff Augmentation

ISO 27001:2005 Certified
